Model DMSR-2

Dock Watch with Loader Alert/Truck Driver Call System and LDMS

Dock-Watch:

- **Dock -Watch:** Mounted in your loading dock bumper. Dock Watch monitors the position of the docked trailer.
- **24/7 Trailer to Dock Safety:** Monitoring the trailers movement during the loading or unloading process, Dock Watch alerts the loader and the truck driver if and when “Trailer Creep” moves the trailer to an unsafe position. Your loader will be notified by an automatic alarm and the truck driver will be alerted by the pager beeping and vibrating.
- **110 db Audible Alarm:** The audible alarm will sound when “Trailer Creep” or an “ Early Departure” has occurred and will continue until the trailer has been repositioned or the Audible Alarm Cancel Button has been activated by the loader. The alarm also signals the truck driver on the unsafe condition.
- **Alarm Light:** A Red light indicator will illuminate when the alarm sounds, giving the loader and by standards a quick visual reference. The red light indicates an unsafe condition and loading or unloading must stop.
- **Audible Alarm Cancel Button:** The Cancel Button will silence the 110db alert alarm, but the unsafe condition will continue to exist until the trailer has been repositioned to a safe distance to the loading dock. The Loader Alert System will automatically reset.
- **Load Ready Button:** Activated by your loader, indicating load completed, this procedure calls the driver to the office or shipping manager.
- **Truck Driver Call System:**
 1. Pager: Beeps, vibrates and has preloaded messages.
- **Set Point Time Delay-Adjustable:** Time between when trailer is positioned at dock door and dock watch system sets. This time is adjustable from 30 seconds(min) to 5 minute(max).

LDMS:

- **The LDMS:** Monitors and electronically logs all Trailer Activities and events.
- **Trailer Arrival Time:** Dock Watch identifies trailer arrival and the LDMS logs the event.
- **Load Ready Button:** Activated by your loader, indicating load completed, the LDMS logs the event.
- **Trailer Creep/Early Departure Alarm:** An alarm is indicated on the LDMS warehouse monitor in the shipping clerks office and the LDMS logs the incident.
- **Departure Time:** Customer driver departure, the LDMS log this event.

Loading Dock History Reports:

- **Each Loading Dock:** Past and Present Reports.
- **At the Touch of a Button:** Real Time Loading Dock Activities.
- **Track Loading Dock Events By:** Dock, Day, Hours, Minutes, Monthly, Quarterly, Annually.
